

**Special Session on Soft Clustering  
Under the framework of**

**The 2014 IEEE/WIC/ACM  
International Conference  
on Web Intelligence**

**11–14 August 2014 / Warsaw, Poland**

**Session Chair**

Pawan Lingras

Saint Mary's University, Halifax, Canada

pawan@cs.smu.ca

**Introduction:** Soft clustering has been found to be useful in real-world applications because it allows for fuzzy or rough boundaries of clusters. This special session aims to bring together researchers in soft clustering. Papers describing theoretical aspects, prototype systems, tools and techniques, applications, and surveys of existing work (position papers), as well as future directions are welcome. The topics may include but are not limited to the following list:

- Fuzzy clustering
- Rough clustering
- Evidential clustering
- Hybrid clustering
- Use of evolutionary and neuro-computing for soft clustering
- Applications of soft clustering to various aspects of Web Intelligence

**Important Dates**

- Submission of special session papers – March 23, 2014
- Acceptance notification for special session papers – May 4, 2014
- Camera ready submission of papers – May 18, 2014

**Instructions for Authors**

All submitted papers should be formatted according to the IEEE 2-column format. The length of a paper should not exceed 8 pages. Please refer to the call for papers page for more details
